Instrument Recovery

## Crucial insights into lost, missing, and unused instruments

CensisAI<sup>2</sup> Instrument Recovery gives you the insights you need to understand how many instruments you're losing, where problem areas are, and how to recover costs associated with buying new instrumentation.

### Take Control of Your Surgical Instrument Inventory

Gain access to pivotal insights on lost, missing, damaged, and unused surgical instruments. Easily see trends in your instrument inventory, including surgical specialty issues, commonalities in instrument usage, training opportunities, and personnel productivity.

### Recover Costs Associated with Missing Instruments

Visualize where instruments go missing and identify underutilized trays that can be re-purposed to support active trays. CensisAI<sup>2</sup> Instrument Recovery also provides enhanced functionality in CensiTrac like being able to track which instruments sets come into Decontamination in the same case cart so techs know where to look for missing instruments first.

### Improve SPD and OR Communication

Re-purpose under-utilized instruments to complete critical sets, recognize instrument training opportunities in both departments, and mitigate costs associated with vendor sets needed to cover missing instruments.
